

# How FiveP turns Microsoft 365 into a governed, lifecycle-driven, AI-ready environment with Orchestry

End-to-end tenant visibility

Embedded lifecycle controls

Stronger services and pipeline

## About FiveP

Founded in 2013, FiveP is one of Australia's leading providers of Microsoft 365 consulting services, and the experts in information management, governance, and security for Microsoft SharePoint, Teams, and Copilot. They help organizations build and adopt smarter, highly secure, and more connected digital workplaces that are ready for the next wave of AI-powered innovation.

### **The challenge: Bringing clarity and lifecycle control to sprawling Microsoft 365 environments**

Across their customer base, FiveP saw the same pattern emerge: Microsoft 365 environments growing faster than they could be governed. Workspaces lacked ownership, content had no defined lifecycle, and collaboration sprawl created uncertainty for both users and IT. With AI making more of the data within the tenant visible, the risk profile increased.

FiveP needed a governance foundation that could provide clarity quickly and support a shift toward lifecycle-aware ways of working.

#### **Key requirements included:**

- ✓ Embedding lifecycle governance and workspace reviews directly into the flow of work
- ✓ Template-based workspace creation to reduce decision fatigue and enforce consistent structures
- ✓ Clear reporting and dashboards to surface ownerless workspaces, sharing risks, and dormant sites
- ✓ Automated policy application to simplify clean-up and reduce manual remediation effort
- ✓ Strong alignment with Microsoft 365's native governance capabilities and AI/Copilot readiness initiatives

**Every asset and workspace should be created with purpose, governed with clarity, and retired with dignity.**

CEO, FiveP  
David Dennis

## Why FiveP chose Orchestry

Modern digital workplaces require structure from the outset. Microsoft 365 environments must be intentionally governed, clearly structured, and able to deliver measurable business value.

FiveP's vision for the modern workplace is one where people can do their best work because information is organized, permissions are controlled, governance is embedded into how the platform operates.

FiveP partnered with Orchestry because of the strong alignment between their advisory-led approach and Orchestry's governance platform. FiveP designs structured, lifecycle-driven modern work environments. Orchestry operationalizes that structure at scale through controlled provisioning, policy enforcement, reporting, and ongoing workspace management.

The partnership is complementary by design. FiveP focuses on strategy, information architecture, change, and adoption. Orchestry ensures the governance they design is consistently applied and sustained within Microsoft 365 so collaboration remains seamless for users while governance operates in the background, structured and consistent.

## Deployment approach

FiveP takes a phased approach when deploying Orchestry for clients. Implementations typically begin with administration and reporting to establish clear visibility into ownership, sharing, and lifecycle gaps across the tenant. Once teams are familiar with the environment, FiveP introduces templates and structured workspace creation to bring clarity and consistency to how new workspaces are formed.

From there, organizations gradually expand their use of Orchestry as maturity grows. Lifecycle policies, archival processes, and governance reviews are added in later phases, allowing customers to adopt stronger controls without disrupting day-to-day work.

Because Orchestry is a managed, off-the-shelf platform, deployments are straightforward, follow best-practice configurations, and quickly reduce operational risk.

### Results + impact

Orchestry has delivered clear benefits for both FiveP and its clients, from tenant insight and remediation to a stronger lifecycle story that supports new business.

#### Tenant visibility

Dashboards surface ownerless Teams, dormant sites, permissive sharing, and other lifecycle gaps that were previously hard to see.

#### AI readiness

Reducing forgotten and sensitive workspaces and putting lifecycle controls in place helps organizations feel more confident introducing tools like Copilot.

#### Actionable clean-up

Policy-driven actions make it easy to move from "we might have a problem" to clear remediation without heavy manual effort.

#### Business growth for FiveP

Orchestry underpins an end-to-end lifecycle narrative that resonates with customers, driving interest, pipeline, and land-and-expand services.

## Partner experience

FiveP was Orchestry's first Premium Partner, reflecting both the strength of their information-management practice and the volume of customer work delivered on the platform. Premium status gives FiveP more flexibility in commercial discussions, access to co-marketing support, and a tighter feedback loop with Orchestry leadership and product.

The partnership is hands-on in the ways that matter: fast answers when questions come up, direct conversations about what customers are seeing, and clear visibility into a roadmap that tracks with Microsoft 365 and real governance requirements.

That combination helps FiveP keep its Secure Productivity offering current, position Orchestry confidently against other tools, and show customers a practical path from unmanaged growth to AI-ready governance.

## Premium Partner benefits

 Improved partner margins

 Direct roadmap access

 Co-marketing support

Orchestry has become the central tool that drives our philosophy. We've seen it resonate in the uptake and interest – and in the pipeline and deals we're getting from it.
